If you are looking for a new mobile browser, even the most superficial research will present Google Chrome for Android as the possibility. The Android version of the incredibly popular Google browser performs exactly how they expect. In fact, unless this is the first time that he uses a mobile browser, it is unlikely to surprise you a lot, since Chrome seems to have spent the last few years by consolidating their browser empire rather than develop something new and revolutionary. When he was Google Chrome. First released, it was billed as a light-fast browser that has managed to overcome almost all other apps on the market. In interrupt years, it continued to grow in popularity, but in recent years, it seems to have slowed a little in terms of innovation meanwhile, other browsers have run to recover and the things that have first marked chrome as special are now equally on average. Chrome for Android is no exception. As its desktop-based counterpart, it is light and fast, easy to use and look good. It offers everything we expect from a mobile browser from an excellent download management, bookmarks and easy sharing of accessible customization options and intuitive card management. We are particularly passionate about the arrangement on Chrome for Android. Once logged in, not only can you access your saved information (such as password, history and bookmarks) between devices, but you can also access the cards that you have opened on the other device, which is something that is something Users get used very quickly and rely. It really contributes to a feeling of seamless navigation, which is really what is the whole chrome experience. When it comes to security and privacy, we see one of the areas that Google has not managed to convince everyone. While for casual user security and privacy options seem completed and reassuring, more demanding users have expressed concerns about the amount of data that Google can see, and what, exactly, does it with those data. It is right to emphasize that Google Chrome is not the only app that people complain about this arena, but being one of the largest and much in public eyes, becomes an irresistible goal for many. If you are the practical type to solve your problems, you will find a wealth of help resources for Google Chrome for Android, from the official help documentation to well-populated forums. If you are the kind of person who prefers to intensify their problems to a real person's real person, however, you could wait a little. It is notoriously difficult to talk to a real employee, live Google, and for Chrome for Android users, it's not exception. Where can you run this program? This version of Google Chrome is specifically designed for Android phones. On the Google Chrome homepage, you will be able to find a version for almost all imaginable platforms. Is there a better alternative? The demand for millions of dollars. There is definitely a huge number of alternative browsers for Android but if you consider it or not it is better that is completely enjoyed. Being goals and maintaining the fear of GoogleScare on one side, Google Chrome for Android is definitely one of the best, if not the best. If you are nervous about Google or worried about your privacy, however, you will probably feel that one of the narrow competitors of Chrome is a much better bet. When it comes to security and privacy, let's see one of the areas that Google hasn't have been enough to convince everyone. While for casual user security and privacy options seem completed and reassuring, the most demanding users have expressed concerns about the amount of data that Google can see, and what, exactly, does it with data. It is right to emphasize that Google Chrome is not the only app that people complain about this arena, but being one of the largest and much in public eyes, becomes an irresistible goal for many. If you are the practical type who like to solve problems Problems own, you will find a wealth of help resources for Google Chrome for Android, from the official documentation of the Guide to the well-populated Forums. If you are the kind of person who prefers to intensify their problems to a real person's real person, however, you could wait a little. It is notoriously difficult to talk to a real employee, live Google, and for Chrome for Android users, it's not exception. Google Chrome in all its versions was the undeniable browser king. It is still a great option and a trustworthy if you need a browser for an Android phone. If we look a little less than enthusiasm, however, it is probably because there are 2 small points that steal part of the shine. First of all, Google Chrome for Android (or any other platform, for that matter) does not seem to have inovated or improved a lot in recent years. It could be solid, but it's certainly not exciting. Secondly, it is firmly part of the GoogleVerse. Now, it's worth indicating that there is no evidence we know about what makes this negative, but if you are part of the suspicious team, has definitely taken away a bit of shine.should download it? Sure. If you feel benign on Chrome is part of the Google Vendor, it is a solid and attractive browser that is at least as good as one of the main competitors. For many, especially people who use Chrome on other platforms, is an obvious choice. (Image Image: Shutterstock) Power Android users will now be able to open more cards and search even more quickly in Chrome as Google is now pushing a 64-bit version of your browser on supported smartphones. When the first 64-bit version of Android was released six years ago, the research giant started testing a 64-bit version of Chrome for Android in July of last year. Now, however, users of Android whose devices have been updated to Android 10 and will be able at least 8 GB of RAM to use the new 64-bit version of Chrome.as Google started rolling the 64-bit version of Chrome Users whose smartphones satisfy its requirements, some Android users can already use the updated version of your browser. You can check to see if your browser has already been updated by opening Chrome and typing `chrome://version` in the browser address bar. This will make a wealth of different information, including the build that You are using, which Android version you are using and the device data. However, you can easily add if you run Chrome 64-bit as the information will be displayed at the top of the list after the version.Y number using version a 64 bit of Chrome, you will probably experience some performance improvements as a result of better RAM management. Next, Google designs to only allow developers to upgrade 64-bit apps for Google Play Store from August of this year and next year, The latest arm processors only support 64-bit apps. We also presented the best smartphone smartphone msperveruser there are dozens of great browsers Web for Android, everyone offers a unique blend of functionality that can make it easier and fastest browsing the web on your mobile device. Decide which is the best for you is often a matter of taste, but last week we asked you what browsers you thought were the best of the package, and then we got a closer look at the five best Android browsers based on Your nomination. Now we returned to highlight the general winner. You already know what web browser we think better for Android, but only because we like ... we continue to more despite the fact that it is only available on the devices that do the sandwich ice cream and Jelly Bean, most of you Chrome as the best Android as the best Android browser, with it took more than 38% of the total vote. The race for the second was it could be narrowest, with the browser of the Dolphin that bordered the competition with a little more than 25% of the votes. Right behind it in third it was a mobile work, taking home near 24% of the vote. In fourth place it was Firefox, with over 10% of the vote and refueling refueling The back of the last has been the boat browser, with 2% of the cast of the votes. Alvea five is based on the reader's nominations. As with most Hive Five posts, if your favorite has been left out, it's not because we hate him "it's because he has not received the requested nominations in the call for the post of the contender to make the first Five. We understand that it is a bit of popularity competition, but if you have a favorite, do we want to hear it. Have a suggestion for hive five? Send us an email to tips+hivefive@lifehacker.com! Sometimes I take some questions rather Intense for the weekly Lifehacker weekly column, hacking this, security that, because -s-is-the-porn-on-my-it-it -ys. real monumental stuff. This week, I will go to lighten the a little tone helping a reader with an Android discomfort, one that you could put yourself into question from time to time. LifeHacker Reader Loretta writes: Thanks for the great tips on Tech 911! Here is my question ... Because I can go back On my Android smartphone, but don't forward to a site from I returned and I want to come back. Instead I have to re-establish everything again .th, Chrome. So, for any reason, Google has decided to put a dedicated button `⏪` "Back" in a very obvious position within the Android UI is a much more important use of the space that dedicates the pixels to His companion, the powerful `⏩` "Perforward" button `⏭`. (At least, on Android.) To be honest, I can't blame. Jump around the web pages all day, but I generally find myself back much more than I never need to go ahead. After all, when you come back to the path of the pancrumb that is your web session, you can always `⏩` "way forward by clicking or touching the link previously. So you come back to the site you were just looking at. However, certainly, certainly, this is a little more than a pain in the ass if using a button `⏪` "back", scroll or shortcut takes you to the beginning of a web page, and then you have to hunt to find the link you have Brought wherever you were. Inessasando, this is clearly annoying for you to treat, so I have some solutions. First of all, and above all, here's where you will find the Forward button in the Chrome Android app. Just touch the Triple-Dot icon in the top right corner of the browser. Look for the arrow episode forward - you can't miss. I'll make you a better one, though. Enter Chrome: // Flags in the address bar of your browser and do a search for the word `⏪` "Story" `⏩` in the results, look for the call option `⏪` "Overscroll History Navigation." `⏪` enables IT, restart your browser, and now you should be able to scroll from the left and right extreme sides of the Chrome browser window to go back and forward. I think it's even faster for you than touching a button (or a series of buttons), even if I want Chrome to have a simple setting to release an arrow forward in the lower right corner of the browser for those who want it. Do you have a technological question to keep you at night? Tired of solving Windows or Mac problems? Looking for advice on apps, browser extensions or utilizes to make a certain task? Let us know!
